PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building production-grade REST APIs, concurrent backend systems, and responsive frontend interfaces using Go (Golang), React.js, and PostgreSQL. Improved API throughput by 25–35% and reduced query latency by 30% through targeted indexing and schema design. Proficient in goroutines, channels, JWT authentication, middleware design, and Clean Architecture. Built and integrated full-stack features across Golang backends and React.js frontends. Experienced with Agile/Scrum, CI/CD pipelines, Docker, and Linux environments.

EXPERIENCE

Bridgeon Solutions LLP

Jul. 2024 – Present

Full Stack Developer Intern

Calicut, Kerala

- Designed and shipped scalable RESTful APIs using Golang (Gin/Fiber), increasing request-handling throughput by 25–35% under concurrent load.
- Optimized PostgreSQL schemas with GORM and targeted indexing strategies, cutting average query latency by 30%.
- Implemented goroutines and channels for concurrent backend processing, improving efficiency by 20%+ with zero race conditions.
- Designed and enforced JWT-based authentication and middleware pipelines, reducing unauthorized access incidents to zero during testing.
- Built reusable React.js components with Tailwind CSS and Context API, reducing feature development time by 20% across sprint cycles.
- Integrated backend REST APIs with React.js frontend, improving overall page load performance by 15%.
- Led code reviews within an Agile/Scrum team of 5, contributing to on-time delivery and reduced post-release bugs.
- Participated in daily standups and sprint retrospectives to identify blockers and improve sprint velocity.

PROJECTS

YUMZY – Scalable Full Stack E-Commerce Platform

Nov. 2024 – Jan. 2025

Tech Stack: Go (Golang), Gin, Fiber, PostgreSQL, GORM, JWT, REST APIs, React.js, Tailwind CSS, Context API, Docker

- Architected a full stack e-commerce platform with product catalog, cart, order lifecycle, and role-based access control (RBAC) using Clean Architecture principles.
- Built high-performance REST APIs in Golang (Gin/Fiber) with JWT authentication and custom middleware design — zero unauthorized access during testing.
- Designed ACID-compliant PostgreSQL schema with optimized indexing and transactions, ensuring 100% data consistency during concurrent multi-user operations.
- Implemented real-time inventory management with goroutines and channels achieving 100% stock accuracy and eliminating overselling under load tests.
- Developed a responsive React.js frontend with Tailwind CSS and Context API for global state management, reducing load time and improving cross-device responsiveness.
- Containerised the full application stack with Docker, ensuring consistent environments across development and deployment.

TECHNICAL SKILLS

Languages: Go (Golang), JavaScript (ES6+), SQL, Bash (basic)

Backend: Gin, Fiber, GORM, RESTful APIs, JWT, Middleware design, Goroutines, Channels, gRPC, Clean Architecture

Frontend: React.js, Tailwind CSS, Context API, Responsive UI Design, Component Architecture

Database: PostgreSQL, Schema design, Query optimization, Indexing, Transactions, ACID compliance

Concepts: Data Structures & Algorithms, System Design, Concurrency, RBAC, Agile/Scrum, Microservices

Tools & DevOps: Git, GitHub, Docker, Linux (basic), Postman, VS Code, npm, CI/CD

Soft Skills: Code review leadership, Cross-functional communication, Team collaboration, Adaptability

EDUCATION

University of Calicut

Jun. 2021 – Apr. 2024

Bachelor of Commerce (Finance) | Kerala

Transitioned into full stack software development through self-directed learning and practical internship experience in Go, PostgreSQL, React.js, and REST API development.
