Calicut, Kerala

Professional Summary

GoLang Backend Developer with hands-on production experience designing scalable RESTful APIs, high-throughput microservices, and secure authentication systems using Go (Gin/Fiber), PostgreSQL, and gRPC.

Track record of optimizing database access layers, tuning microservice throughput under concurrent load, and building thread-safe execution pipelines with Go concurrency primitives — backed by strong debugging and system-reliability skills.

Technical Skills

Programming Languages: Go (Golang), JavaScript (ES6+), SQL

Backend Frameworks & Protocols: Gin, Fiber, gRPC, Protocol Buffers (Protobuf), RESTful API Design

Architecture & Security: Clean Architecture, System Design, Concurrency (Goroutines/Channels), JWT, OAuth 2.0, RBAC

Data Structures & Algorithms: Arrays, Linked Lists, Stacks, Queues, Binary Search Trees, Heaps, Graphs (BFS/DFS), Sorting Algorithms, Hashing

Databases & Caching: PostgreSQL, Redis, GORM ORM, Schema Design, Composite Indexing, Query Optimization

DevOps & Infrastructure: Docker, Docker Compose, CI/CD (GitHub Actions), Prometheus, Grafana, Git, AWS

Version Control: Git, GitHub

Testing: Unit Testing (Go native testing package)

Methodologies: Agile/Scrum

Projects

EliteGate API Gateway

2026

elitegateway.site

Go, Gin, net/http, Redis, PostgreSQL, gRPC, Docker, React, Zustand, Protobuf, JWT, OAuth 2.0

- Built a multi-tenant, containerized API Gateway supporting HTTP and gRPC proxying, JWT authentication, Redis-backed rate limiting, and round-robin/least-connection load balancing.
- Integrated OAuth 2.0 third-party login (Google, GitHub) alongside JWT authentication, enabling secure social sign-in for tenant users.
- Enforced tenant isolation using PostgreSQL Row-Level Security, per-project Redis cache namespacing, and RBAC-enforced resource scoping across all API surfaces.
- Developed a React + Zustand admin portal for managing gateway routes, upstreams, and policies, supporting live configuration reloads without service restarts.

YUMZY E-Commerce Backend

2025

github.com/AbduManaam/E-Commerce.Backend

Go, Gin, Fiber, PostgreSQL, GORM, JWT

- Architected a production-grade e-commerce engine using Clean Architecture to isolate domains, applications, and database handlers for sustainable scaling.
- Applied channel-based concurrency controls to preserve transactional consistency during simultaneous checkout operations.

gRPC Authentication Microservice

2025

github.com/AbduManaam/grpc-microservices-Day-5

Go, gRPC, Protobuf, JWT, Interceptors

- Built a secure service-to-service auth engine using gRPC unary interceptors to evaluate authorization signatures via strongly-typed Protobuf contracts.

- Built a modular Go library implementing core data structures (singly/doubly linked lists, stacks, queues, binary search trees, min/max heaps) with documented time/space complexity for each operation.
- Implemented sorting algorithms (Quick Sort, Merge Sort, Heap Sort, Bubble/Insertion/Selection) and benchmarked performance across input sizes using Go's testing package.
- Built graph traversal algorithms (BFS, DFS) using adjacency-list representation and applied hash-table-based solutions across arrays, strings, trees, and graphs.
- Designed a CLI-based runner with unit tests validating correctness of each module.

Experience

Bridgeon Solutions LLP	Jul 2025 – Present
<i>Backend Developer</i>	<i>Calicut, Kerala</i>

- Engineered high-throughput RESTful APIs in Go (Gin/Fiber), optimizing handlers and connection pooling to scale application capacity and maintain stability under concurrent load.
- Designed optimized PostgreSQL schemas using GORM and composite indexing, reducing query latency and eliminating bottlenecks across critical data access paths.
- Built concurrent background pipelines with goroutines and channels, improving data processing throughput while ensuring fully thread-safe execution in production.
- Architected a stateless JWT authentication layer with custom middleware enforcing granular RBAC, securing internal routes with zero exploit incidents in production.
- Worked in an Agile (Scrum) environment, participating in sprint planning, daily stand-ups, code reviews, and retrospectives.

Education

University of Calicut
Bachelor of Commerce — Kerala

- Transitioned into backend software engineering through intensive self-directed study, building complex multi-tier projects using Go, distributed stores, and concurrent paradigms.
