PROFESSIONAL SUMMARY

Junior Backend and Full Stack Developer with hands-on experience building production-grade REST APIs, concurrent backend systems, and optimized database schemas using Go (Golang), Gin, Fiber, and PostgreSQL. Improved API throughput by 25-35% and reduced query latency by ~30% through targeted indexing. Experienced with Agile/Scrum, code review, and cross-functional collaboration. Seeking a backend or full-stack role to build scalable systems. Open to Docker, AWS, and CI/CD pipelines.

EXPERIENCE

Bridgeon Solutions LLP

Jul. 2025 - Present

Full Stack Developer Intern (Backend Focus)

Calicut, Kerala

- Designed and shipped scalable RESTful APIs using Golang (Gin/Fiber), increasing request-handling throughput by 25-35% under concurrent load.
- Optimized PostgreSQL schemas with GORM and targeted indexing strategies, cutting average query latency by approximately 30%.
- Implemented concurrency using goroutines and channels, improving backend processing efficiency by 20%+.
- Collaborated with frontend engineers to integrate backend APIs with React.js, improving page load performance by approximately 15%.
- Built and maintained reusable React.js and Tailwind CSS components, reducing feature development time by 20% across two sprint cycles.
- Led code review sessions within an Agile/Scrum team of 5, contributing to on-time delivery and a measurable reduction in post-release bugs.
- Participated in daily standups and retrospectives to identify blockers, refine requirements, and improve sprint velocity.

PROJECTS

YUMZY - Scalable E-Commerce Web Application

Nov. 2024 - Jan. 2025

Tech Stack: Golang, Gin, Fiber, PostgreSQL, GORM, React.js, Tailwind CSS, JWT, REST APIs

- Architected a full-stack e-commerce platform with product catalog, cart, and order lifecycle management using role-based access control (RBAC).
- Built high-performance REST APIs in Golang (Gin/Fiber) with JWT authentication and middleware design, reducing unauthorized access incidents to zero during testing.
- Designed an ACID-compliant PostgreSQL schema with optimized indexing and transactions, ensuring 100% data consistency during concurrent multi-user order operations.
- Implemented real-time inventory management achieving 100% stock accuracy and eliminating overselling under simulated load tests.
- Applied goroutines and channels for concurrent order processing, maintaining data integrity with zero race conditions.
- Optimized frontend with React.js and Tailwind CSS using Context API for state management, reducing load time and improving UI responsiveness.

TECHNICAL SKILLS

Languages: Go (Golang), JavaScript (ES6+), SQL

Backend: Gin, Fiber, GORM, RESTful APIs, JWT, Middleware design, Concurrency (Goroutines, Channels)

Frontend: React.js, Context API, Tailwind CSS, Responsive UI design

Database: PostgreSQL, Schema design, Query optimization, Transactions, Indexing

Concepts: Data Structures & Algorithms, System Design, Clean Architecture, Agile/Scrum, RBAC, ACID compliance

Tools: Git, GitHub, VS Code, Postman, npm, Linux (basic), Docker (familiar)

Soft Skills: Team collaboration, Code review leadership, Cross-functional communication, Adaptability

EDUCATION

University of Calicut

Jun. 2021 - Apr. 2024

Bachelor of Commerce (Finance) | Kerala

Note: Transitioned into software development through self-directed learning and practical internship experience in backend engineering.
